

PH.D. IN FOOD SCIENCE AND NUTRITION, NUTRITION SPECIALIZATION

The Ph.D. in Food Science and Nutrition, Nutrition Specialization includes coursework in advanced nutrition sciences and nutrient metabolism, and depending on the research area will include supporting basic and applied sciences, and the communication of nutrition principles in the community. Ultimately, this area focuses on the relationship between nutrition and health, at the cellular, organismic, or community level, depending on the research opportunities provided by the faculty advisor(s).

Most students entering this Ph.D. program will bring in 30 credits from a master's program in a related field. The curriculum represents a total of 42 credits beyond the master's level. If a prospective student has fewer than 30 credits toward the program, an individualized curriculum plan is developed by working with a primary advisor to cover possible deficiencies.
